

Gain control with complete workflow management for your NAS

Share, Collaborate, Control!

Tiger **Project Serve** is the backbone of an advanced Shared Storage Workflow system. Project Serve solves the problem of managing creative production pipelines, and accelerates workflows for all standard production and post software, with a simple way to create workspaces and users, control their access and permissions, and minimize error-prone, manual media management. Get native-level support for Avid, along with all your other creative tools on Windows, Mac, and Linux. Use Tiger Project Serve to transform your standard NAS into a complete workflow system to make content management work easy, and boost your productivity and ROI.

Everything you need for digital pipelines

- Plug-and-play connectivity to any standard NAS
- Easy, artist-friendly web UI
- Support for all your creative apps
- Avid file system emulation with bin locking
- Mac, Linux, and Windows
- User creation and management
- Workspace creation and management
- Workspace quota - control maximum size
- Remote proxy viewing
- Easily locate files and footage with Instant search
- Time-saving project Templates

Precise User Control

Perfect for large and small teams of staff and freelancers that need to keep shows organised and separate, Project Serve lets you create and manage users, assign permissions, and monitor project access. You can protect sensitive material and prevent unwanted deletions. Just use the simple web UI to create an infinite number of workspaces, which can be set for single-user write, multi-user write, or Avid bin-locking functionality. With single-user write mode the first user gets Read/Write permissions, and subsequent users get Read Only. With multi-user write, all users get R/W permissions. Project Serve Unlimited bundle supports Active Directory for easy integration into your domain.

Complete Simple High Performance

See www.tiger-technology.com/projectserve for complete details.

Everything you need

Easily share and manage media and metadata.

With Project Serve, your projects:

- Are centrally stored
- Appear as desktop drives
- Can be dynamic (can grow/shrink) or fixed size
- Are accessible only to the users you specify
- Reduce storage usage by sharing single instances of media
- Can be templated for recurring shows and projects

Project Serve allows simultaneous ingest, logging, editing, special F/X, color-grading, graphics, audio sweetening, encoding, or any other process from any platform.

Superior Avid workflows

Project Serve offers full Avid file system emulation including bin-locking, giving you native-level Unity/ISIS support in an affordable, easy to use system so you don't have to compromise your budget or your workflow. With Project Serve, users can choose where to store their Avid Media, can easily backup an entire workspace, and can choose from static or dynamic workspace sizes for maximum flexibility and control. Startup is fast as only the media in the active workspace is scanned when Media Composer boots, and there is no Avid Media Folder bloating and corruption. Each Project Serve workspace can be set with its own access type, so you can have a mix of open and Avid workspaces on your storage. You get full Avid functionality plus all Project Serve's additional features so you can do more, for less.

Specifications

Form	1 x 1U, 19" rack-mount chassis (43.5mm x 437mm x 700.7 mm)
Net weight	approx. 13kg/29lbs
Gross weight	approx. 24kg/53lbs
Power Supply Unit	450W, Hot-swap, 1+1 Redundant
Temperature Range	Operating from 10°C to 35°C (50°F to 94.9°F) Non-operating from -40°C to 70°C (-40°F to 158°F)
Humidity Range	Operating: 8%~90% non-condensing Non-operating: 5% ~85% non-condensing
Storage Requirements	standard NAS volume with SMB/ CIFS sharing capability
Connectivity	1GB/10 GB Ethernet

Project Serve key features:

- Makes project workflow, user control, and media management easy
- Enterprise-class appliance with 24/7 Professional Technical Support
- Connects to any standard NAS (SMB/CIFS)
- User/Team Management - Control who in the team can access projects and media
- Support for Active Directory Users and Groups
- Public/Private Workspaces - collaborate with others or work privately
- Project Sharing - Avid bin locking, Adobe CC, Final Cut Pro/X, ProTools, etc.
- Native-level Avid support plus additional productivity features and easy UI
- Completely dynamic workspaces - no formatting, resizing, or pre-allocation required
- Workspace as a locally mounted drive - unlock the network capabilities in all your apps
- Proxy Generation - Review any video clip or image sequence over the network
- Instant Search for keywords, clip names, time code, codec, formats
- Template Creation - Create new projects from scratch or using templates
- Activity Log
- Workspace backup

All features and specifications subject to change without notice. Some features may require additional licensing. Playback performance and access speed are dependent on and subject to any limitations of the connected storage volume and the server it is managed by.
